

FOUNDRY ART

FINE BRONZE MADE IN USA

From the artists of
Lowitz & Company

Foundry Art Straight Line 10-inch liner cast in White Bronze

How We Make Our Tiles

We begin by carving a pattern by hand in hard sculptor's wax. From our original wax tiles we make multiple casts, or "patterns." These patterns are pressed into specially prepared, fine sand, creating exact impressions of the designs in the sand.

Next, into each sand impression we pour white-hot molten bronze. After the bronze cools, the raw tiles are excavated from the sand. We then grind the edges of the tiles by hand to make them clean and square.

Next, we put the tiles through our proprietary ten-step finishing process to smooth their surface and give them the distinctive Foundry Art finish – just the right balance between rough and refined.

The morning that the tiles leave our studio, we buff them one last time, brush on a protective coat of wax, and polish each tile by hand with a soft cloth.

Artistry + Reliability

Since we began making tiles in 1990, we have known that success depends on both our artistry and our reliability.

We are imaginative and free-thinking when it comes to designing our tiles, but when it comes to production, filling orders and working with our customers, we are as grounded and steady as can be.

A Personal Spirit

We value the human connections that making tiles invites. In addition to getting to know you, our salespeople, we reach out to each customer by including a handwritten thank-you note with every order.

The quality of daily life

We do everything we can to make selling our tiles easy, fun and hassle-free.

We measure everything we do by how it improves the quality of daily life – your life, your customers' lives, and our lives here in the studio.

And we always try to have fun while we work. After all, as Annie Dillard wrote, "How we spend our days is, of course, how we spend our lives."
